25X1

1. On 15 July 1955, it was observed from the intersection of Schiller-Strasse and Gross - Moehringerweg in Stendal, that about 6 men were employed in entrenching work in the AA gun emplacement at Uenglinger Hill. No guns were seen.

25X1

                     the AA guns could be seen only when the troops were alerted; since, then, the gun barrels were elevated. An alarm was sounded by heating an iron plate in the AA gun emplacement.

25X1

25X1

                     at least two batteries were stationed there. The AA gun emplacement was surrounded by field fortifications including bunkers which presumably served as billets for the gun crews. The field fortifications extended from about 50 meters west of Schiller-Strasse toward the west and were about 300 to 400 meters wide and from north to south had a depth of approximately 80 meters. A Fishnet and rotating Token radar set was observed in the western portion of the AA gun emplacement. A radio truck was parked near the Fishnet radar set. The distance between both radar installations was about 80 meters. Two A-shaped iron masts, about 20 meters high, were located in the eastern portion of the AA gun emplacement, about 40 meters west of Schiller-Strasse. Both masts were connected with an antenna. The distance between the iron masts was about 50 meters. <sup>1</sup>

2. Between 0600 and 1000 and between 1700 and 2000 almost daily during the period between 19 and 27 July, there was air activity by Il-10s including take-offs and landings. Flying in formations of two, three and four aircraft at medium altitudes and low-level flights were practiced.

                     Between 0800 and 1000 on 19 July, one Li-2 with red rudder crossed over Stendal at an altitude of 500 to 800 meters. Six and eight ~~parachutists~~ parachutists respectively jumped, one after another, from the Li-2. After a short time, parachuting by the same number of parachutists was repeated.
